Customized service through the companies you know and trust.

Nitrile Gloves
Latex Gloves
Vinyl Gloves
Polyethylene Gloves
Disposable Glove Racks

Disposable Gloves

Disposable gloves afford your worker dexterity in applications requiring chemical protection.

Nitrile

Versatile synthetic copolymer used to make gloves. Ideal for stripping and degreasing, chemical washing and is resistant to animal fats and vegetable oils. Nitrile does not contain latex that may cause skin allergies. Available in low to high modulus varieties.

Latex

Natural rubber latex is a milky sap-like substance produced by the rubber tree. These trees are found in Southeast Asia, India and South America. When the trunks of the trees are tapped, they produce latex. This latex is then collected and used in manufacturing. Provides excellent hand protection with an excellent grip. Does not hold up well in organic solvents, oils, greases or fuels such as kerosene or gasoline.

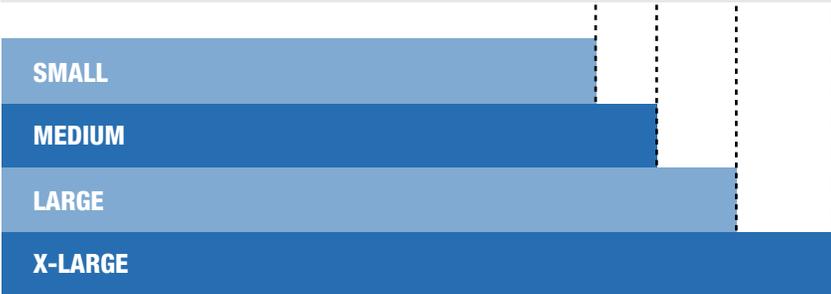

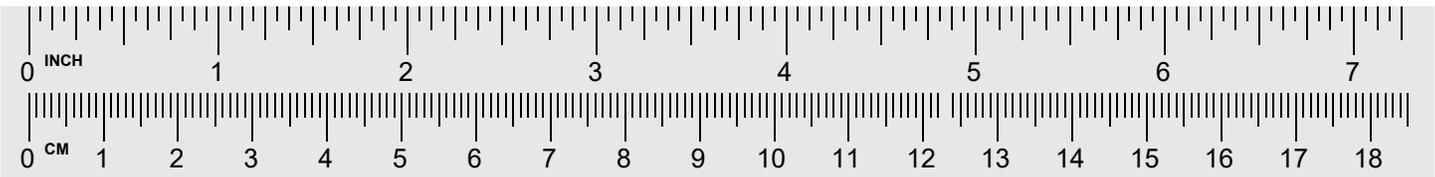

Vinyl

A synthetic thermoplastic polymer which gives excellent resistance to some acids, fats and petroleum hydrocarbons. Excellent for food service applications.

Synthetic Vinyl (Vinyl/Nitrile Blend)

An advanced Synthetic Elastomer and Polyvinyl Chloride blend provides excellent resistance to some acids, fats and petroleum hydrocarbons. Excellent for food service, general purpose and industrial applications.

Substrate	Key Component	Strength & Protection	Comfort & Fit	Possible Allergies	Typical Industry Use
Nitrile	<ul style="list-style-type: none"> Blend of Butadiene, Carboxylic Acids and Acrylonitrile to form a Synthetic Polymer 	<ul style="list-style-type: none"> Very strong High protection Resists punctures and tears Does not tear easily 	<ul style="list-style-type: none"> Conforms to shape of the hand with use resulting in a slightly tighter fit 	<ul style="list-style-type: none"> Low probability of allergies - no protein Popular non-latex alternative 	<ul style="list-style-type: none"> Automotive Dental First Responders Food Service Healthcare Industrial Janitorial Law Enforcement Tattoo & PMU
Latex	<ul style="list-style-type: none"> Natural Rubber Latex 	<ul style="list-style-type: none"> Natural rubber latex is very durable Low leakage rate High protection Does not hold up well in organic solvents, oils, greases or fuels such as kerosene or gasoline 	<ul style="list-style-type: none"> Comfortable fit due to the elasticity of natural rubber Soft to touch Snap-back qualities 	<ul style="list-style-type: none"> High propensity for allergies due to latex proteins Latex powder free Gloves have a less chance of protein allergies versus powdered latex 	<ul style="list-style-type: none"> Automotive Dental First Responders Food Service Healthcare Janitorial Law Enforcement Medical Tattoo & PMU Salons
Vinyl	<ul style="list-style-type: none"> Poly Vinyl Chloride 	<ul style="list-style-type: none"> Weak Breaks with extended or rigorous use Low protection Use in low risk situations Anti-static properties 	<ul style="list-style-type: none"> Comfortable due to looser fit that does not constrict hand Loose fit results in less dexterity 	<ul style="list-style-type: none"> Low probability of allergies - no protein 	<ul style="list-style-type: none"> Aviation Dental Education Foodservice Healthcare Janitorial Cosmetology

Disposable Glove Sizing

The sizing chart above can assist in determining the size glove that would best fit an individual. Please note with the variations in types of gloves this is only a guide to help determine sizing.

Directions

Place widest part of hand on chart above, lining-up the curve by the thumb and forefinger at the left edge.

Get a grip on hand protection

Nitrile Gloves - Industrial Grade

ProWorks® Nitrile Disposable Gloves

- Not for medical use; non-sterile
- Latex free
- Textured fingers
- Excellent comfort and feel

2.5 mil | Length: 9.5"

Item#	Description	Color	Sizes	Selling Unit
GL-N131F(SIZE)	Powder Free	Blue Violet	XS, S, M, L, X	100/bx - 10 bx/cs

Standard: Meets ASTM D6319 for physical properties only
Complies with CFR Title 21 Indirect Food Additive Regulations Part 177 for use in contact with food

ProWorks® Ultra Thin Nitrile Disposable Gloves

- Not for medical use; non-sterile
- Latex free
- Ultra-thin nitrile gloves provide high dexterity, excellent comfort and fit
- 300/box saves time and space

- Economical solution to hand protection
- Formulated from a special synthetic component and soft PVC material, these gloves are softer fit snugly and comfortably to the hands

3.9 mil | Length: 9.4"

Item#	Description	Color	Sizes	Selling Unit
VPF23(SIZE#)	Powder Free	Clear	0(XS), 2(S), 5(M), 6(L), 8(XL)	100/bx - 10 bx/cs 90/bx - 10 bx/cs

Standard: Meets ASTM D5250
Complies with FDA CFR Title 21 Indirect Food Additive Regulations Part 174-178

ProWorks® Vinyl Exam Gloves

- Non-sterile
- Latex free
- Soft touch and comfortable fit

4 mil | Length: 9"

Item#	Description	Color	Sizes	Selling Unit
GL-V104F(SIZE)	Powder Free	Clear	S, M, L, X	100/bx - 10 bx/cs
Standard: Meets ASTM D5250 Complies with FDA CFR Title 21 Indirect Food Additive Regulations Part 174-178				

Stretch Vinyl Gloves - Industrial Grade

ProWorks® Stretch Vinyl Disposable Gloves

- Not for medical use; non-sterile
- Latex free
- Soft like latex and more elasticity than standard vinyl
- Better tensile strength compared to regular vinyl
- Creamy color resembles latex gloves
- Low cost alternative for latex gloves

4 mil | Length: 9"

Item#	Description	Color	Sizes	Selling Unit
GL-SV104F(SIZE)	Powder Free	Cream	S, M, L, X	100/bx - 10 bx/cs
Meets ASTM D5250 for physical properties only Complies with FDA CFR Title 21 Indirect Food Additive Regulations Part 174-178				

Stretch Vinyl Gloves - Exam Grade

VITEX™ Stretch Vinyl Exam Gloves

- Non-sterile
- Made of a special PVC blend
- Exceptional snug fit and some stretchability, they are less baggy than regular vinyl gloves and provide better tactile-sensitivity
- Creamy color resembles latex gloves

3.9 mil | Length: 9.4"

Item#	Description	Color	Sizes	Selling Unit
VTX99(SIZE#)	Powder Free	Cream	0(XS), 2(S), 5(M), 6(L) 8(XL)	100/bx - 10 bx/cs 90/bx - 10 bx/cs
Standard: Meets ASTM D5250 Complies with FDA CFR Title 21 Indirect Food Additive Regulations Part 174-178				

Synthetic Vinyl Gloves - Industrial Grade

ProWorks® Synthetic Vinyl Disposable Gloves

- Not for medical use; non-sterile
- Vinyl, Nitrile Blend
- Made from Advanced Synthetic Elastomer and Polyvinylchloride (PVC)
- DINP, DOP, DEHP Free
- Smooth external finish
- PU Coating in interior surface, powder free
- Better dexterity and fit as compared to standard vinyl gloves

3.5 mil | Length: 9"

Item#	Description	Color	Sizes	Selling Unit
GL-VN104BKF(SIZE)	Powder Free	Black	S, M, L, X	100/bx - 10 bx/cs
GL-VN104VBF(SIZE)	Powder Free	Violet Blue	S, M, L, X	100/bx - 10 bx/cs
Standard: Meets ASTM D5250 for physical properties Complies with CFR Title 21 Indirect Food Additive Regulations Part 177 for use in contact with food				

Polyethylene Gloves

ProWorks® Cast Polyethylene Gloves

- More durable than standard polyethylene gloves
- Loose fit designed for easy and fast on and off
- Great for frequent glove changes
- Embossed for better grip

Item#	Description	Color	Sizes	Selling Unit
GL-CP100(SIZE)	Embossed	Clear	S, M, L	100/bx - 10 bx/cs
Complies with FDA CFR Title 21 Indirect Food Additive Regulations Part 174-178				

ProWorks® Polyethylene Gloves

- Loose fit designed for easy and fast on and off
- Great for frequent glove changes
- Embossed for better grip

Item#	Description	Color	Sizes	Selling Unit
GL-P500(SIZE)	Embossed	Clear	S, M, L, X	500/bx - 20 bx/cs
Complies with FDA CFR Title 21 Indirect Food Additive Regulations Part 174-178				

Stretch Polyethylene Gloves

ProWorks® Stretch Polyethylene Disposable Gloves

- Not for medical use; non-sterile
- Latex free, PVC free, Phthalate free
- 10" length - longer than standard 9" vinyl gloves
- More stretchable than vinyl disposable gloves
- Soft, provides better strength and performance than standard polyethylene and CPE gloves
- Great value alternative to vinyl and thin mil nitrile gloves
- 65% less shelf space required than vinyl gloves

2 mil | Length: 10"

Item#	Description	Color	Sizes	Selling Unit
GL-SP200C(SIZE)	Powder Free	Clear	S, M, L, X, XX	200/bx - 10 bx/cs
GL-SP200B(SIZE)	Powder Free	Blue/Varies	S, M, L, X	200/bx - 10 bx/cs

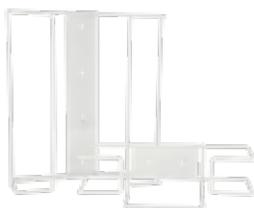

Meets FDA 21 CFR 177 for handling of food in food service application

Please note: The color of the ProWorks® Blue Stretch Poly Gloves will vary from light to dark blue. The box and case size may also vary for a time for all colors. To improve continuity of supply, we are producing the gloves in multiple manufacturing locations, resulting in the indicated variations in packaging and color. The quality and material specifications remain consistent.

Glove Racks

ProWorks® Disposable Glove Racks

- Racks organize and conserve space
- Convenient access and visibility to gloves
- Accommodates all brands and box sizes
- Made of enamel coated steel
- Easy to install and mount

Item#	Description	Color	Size	Case Pack
BHW501CA	1 Box Rack	White	10" x 3.3" x 4"	2/bx - 5bx/cs
DISP-GLOVE3	3 Box Rack	White	14 3/16" x 11 1/2" x 3 3/4"	1 ea

Glove Substance Chart

General Informations And Cautions

This recommended gloves selection guide is offered as a general guidance only. The barrier properties of each glove type may be affected by material type, thickness, concentration of chemical, length of exposure to the chemical and temperature. Disposable gloves are designed for single use only. Gloves should be removed and replaced with a new pair upon exposure to chemicals. Chemical resistance ratings are based on published research data not based on individual glove's testing.

Key: ■ Good ■ Fair ■ Not recommended

Chemical	Latex	Nitrile	Vinyl

Tung oil	Red	Green	Red
Turpentine	Red	Green	Red
Undercoater, rubberized (automotive)	Red	Green	Red
Urea	Green	Green	Red
Varnish	Red	Green	Red

Glove Terms

Absorbable Dusting Powder - A glove powder used to ease the donning of gloves. Donning powder on gloves is composed of cornstarch (USP absorbable dusting powder).

Powder - Due to the natural sticky characteristic of latex, powder is used as the means to prevent the gloves from sticking together and also for the ease of donning. Donning powder on gloves is composed of cornstarch (USP absorbable dusting powder). Powder gloves are easy to put on hands in a wet environment as compared to powder free gloves. Disadvantage: It leaves powder residue on hand and some users may be allergic to powder in general.

Powder Free - Gloves are made powder free through the chlorination or polymer coating processes. The latex protein content is substantially removed from the glove when these processes are used to remove powder.

Examination Grade Gloves - The FDA requires manufacturers of all examination (medical grade) gloves to have a 510(k) device listings on file with the agency. This means that the manufacturer has been tested and approved to manufacture gloves for medical use (typically involves ISO certification, as well). This does not mean that the each glove is officially approved or certified for medical use. The FDA conducts random testing on containers of examination gloves as they enter the U.S to ensure the manufacturer of the gloves maintains the quality requirement.

- Examination Gloves have to meet certain criteria of performance that is set by ASTM standard for example Latex Examination Gloves has to meet ASTM D3578
- The gloves shall comply with the dimension requirements prescribed in the standard
- Physical Properties mentioned in the standard as below
- Tensile Strength, 11 MPa, min
- Ultimate Elongation, 300% , min
- The gloves also need to be tested for Freedom from Holes based on ASTM D5151 to be used as patient examination grade gloves and tested as per below sampling plan and quality level

Characteristic	Related Defects	Inspection Level	Acceptable Quality Level (AQL)
Freedom From Holes	Holes	I	2.5
Dimensions	Width, Length and Thickness	S-2	4
Physical Properties	Before Aging, After Accelerated Aging	S-2	4

Non-Sterile - Examination and non-medical gloves are normally nonsterile. This means that the gloves are not subjected to gamma irradiation that kills micro-organisms.

Not for Medical Use/Industrial Grade/Disposable/General Purpose Gloves

- Disposable Gloves are generally used in the following applications: Food handling, salons/spas, electronic assemblies, laboratorial work, and packing process, automotive, janitorial, general pharmaceutical and home use. These gloves are not recommended for medical use or patient examination, especially to prevent transmission of organisms, blood-borne pathogens and protection against various chemicals.

Elongation - Measurement of the length a glove can be stretched before it breaks. It is expressed as a percent of the original length of the glove right at the moment it breaks. The higher the percentage, the more stretchable the glove material.

Federal Food, Drug, and Cosmetic Act (FFDCA)/21CFR - The FDA is responsible for regulating food additive use. In addition to direct food additives, their regulations also cover substances that may become indirect food additives when food comes into contact with them. In this sense, gloves are indirect food additives, and the FDA regulations include provisions specifying which substances are acceptable components. These can be found in Title 21 of the Code of Federal Regulations, Part 174-178. It is in compliance with these regulations that is critical to glove manufacturers, and should be of greatest interest to end-users. The materials latex; nitrile butadiene rubber; Poly Vinyl Chloride and Polyethylene that are used to make disposable gloves are safe to be used as an indirect additive to come in contact with food.

Glove Thickness (Measured in mil. 1 mil =0.025 mm) - The glove thickness varies from one area to the other. The glove thickness is highest at the tip of the finger; medium at the middle of the palm and lowest at the cuff and it is due to manufacturing process of dipping the hand former up side down in the filled tank. The perception of thicker the glove better the glove quality is not always true. Thicker glove may support longer exposure to chemicals being a stronger barrier than a thinner glove but for other application where tensile strength; elasticity; dexterity are required thinner glove would be preferred choice. With the advancement of manufacturing process; raw material properties thin mil gloves like 3.0 mil nitrile glove now has the same tensile strength like 5.0 mil nitrile glove.

Leaching - The washing and cleansing process of gloves with water in the manufacturing of gloves, by which excess chemicals and/or latex protein are dissolved and washed away from the gloves.

Modulus - A low modulus glove is easy to stretch and flex, whereby a high modulus glove is hard to move and stretch.

Permeation - Movement of substance through a thin film, such as a glove, on a molecular level.

Tensile Strength - Measurement of the amount of force or pull required to break a glove. Tensile strength is expressed in Mpa, and the higher the number, the stronger the glove material.

Rolled Cuffs - Provides strength in donning and helps prevent tearing.

Knit Wrist - Holds the glove secure to the wrist to prevent debris from entering at the wrist.

Safety Cuffs - Help protect the wrist area by extending the cuff (usually a 2 1/2" in length).

Gauntlet Cuffs - Ensure added forearm protection and are 4 1/2" or more in length.

Wing Thumbs - For open handed work (pushing/pulling). Seams do not interfere with work area. Reduced stress on seams.

Straight Thumbs - Construction of glove provides a closed thumb gripping position for comfort and durability.

Keystone Thumbs - Most comfortable glove to wear; added flexibility provides excellent wear resistance.

Ambidextrous - Reversible style can be worn on either hand for a longer lasting use.

Flocked Lining - Cotton fiber applied to the inside of unsupported gloves. Absorbs perspiration and allows for better comfort.
