

## Per- and Poly- Fluoroalkyl Substances (PFAS) Statement

June 2022

Dear Valued Customer,

The following information is provided in good faith and to the best of our knowledge. Kari Out is aware of EPA PFAS requirements, such as municipal water levels for PFOA and PFOS, and legislation by multiple states further regulating the entire class of PFAS, especially in food packaging.

Fluorinated chemicals, such as perfluorinated chemicals (PFCs) including perfluorooctanoic acid (PFOA), perfluorooctane sulfonic acid and its derivatives (PFOS) and other per- and polyfluoroalkyl substances (PFASs), are **not** used in the manufacturing of the products.

Sincerely,

Jeffrey Lando  
Director of Regulatory  
and Quality Compliance
