Sustainability designed with your business in mind.

Sustainability is no longer a “nice to have.” With companies looking to incorporate it into their businesses, packaging should be a key part of any sustainability plan. So you’ve come to exactly the right place. EarthChoice offers the broadest selection of sustainable – and American-made – foodservice products. Whether you’re looking for hot containers or cold cups, recycled materials or compostable products, an efficient supply or expert advice, we have what you need, when you need it.

Sustainability means business

You need a partner who understands your business – and your customers’ changing expectations around sustainability.

With EarthChoice sustainable packaging, you can feel safe sending your food – and your company name – out into the world. It’s better for the environment and better for your business’s reputation.

You can always trust EarthChoice because we tell you exactly how our products are made. No overstatements. No misleading product claims. No distracting, complicated explanations. Only honest and straightforward product information, so you can share your sustainability commitment with confidence. (Want to learn more about sustainability claims? See our Sustainable Packaging FYI page at the back of this guide.)

Each of our products provides at least one of our four benefits – reduce, reuse, recycle, and renew – which you can learn more about on the next several pages.

Better for the Earth – and for business

Reduce

We reduce the use of petroleum-based materials by incorporating other materials like minerals and plant-based starches into select EarthChoice products.

Minerals added to various EarthChoice products result in roughly 50% less plastic than standard PP containers. Starches are used in other applications, thus reducing plastic usage.

Recycle

We manufacture products that include post-consumer recycled materials and actively engage in initiatives to expand recycling of foodservice packaging.

While some may think that consumers recycle to keep materials out of landfills, the real purpose of recycling is to provide a valuable feedstock and reduce our reliance on virgin resources. Incorporating recycled content into these EarthChoice products does just this.

In addition, although many EarthChoice products are designed with recycling in mind, the truth is that recycling of these products is not yet widely available to consumers. Please visit the EarthChoice website to learn which products may be recycled in your area and how we're supporting the industry's efforts to increase recycling of paper and plastic foodservice packaging.

Each EarthChoice product provides at least one of our four benefits to the environment – showing your commitment to sustainability.

Reuse

We design products that may be washed and reused by consumers.

For some consumers, one benefit of plastic take-out containers is the ability to reuse them. Whether used to store leftovers or contain a future home-prepared meal on the go, these EarthChoice containers are ready to be washed in the dishwasher (top rack only) and reused.

Renew

We utilize renewable resources and actively engage in initiatives to expand composting of foodservice packaging.

A growing number of EarthChoice products are made with renewable materials like PLA (a bioplastic made from corn) and paper from trees and other fiber sources.

Given the materials used in some EarthChoice products, they may be composted, and these items meet the appropriate ASTM 6400 or 6868 compostability standards. Please note that most compostable products are designed for commercial composting facilities – not for home composting.

However, composting of these products is not yet widely available to consumers. Please visit the EarthChoice website to learn which items may be composted in your area and how we're supporting the industry's efforts to increase composting of compostable foodservice packaging.

EarthChoice Sustainable Materials

Fiber Blend products are made from a variety of renewable pulp fibers. Many of these products meet ASTM D6868 compostability standard and are compostable in commercial facilities only, which may not exist in all areas. These products are not suited for home composting.

Recycled PET (RPET) is produced from previously used post-consumer plastic products. EarthChoice uses 25% recycled content in RPET packaging based on annual mass usage. This product may not be recyclable in your area.

Mineral-Filled Polypropylene (MFPP) contains an average of 50% less plastic than standard polypropylene containers, which reduces plastic usage.

PLA is a natural plastic material made from corn, which is 100% annually renewable. It is best used for cold applications and has a heat tolerance of 105° F. EarthChoice PLA products meet the ASTM D6400 compostability standard and are compostable in commercial facilities only, which may not exist in all areas. These products are not suited for home composting.

PLA Coated Paper Cups are made from renewable resources and meet the ASTM D6868 compostability standard. They're compostable in commercial facilities only, which may not exist in all areas. These products are not suited for home composting.

Plastarch Material (PSM) is manufactured from 20% renewable plant starch and contains a blend of polypropylene fillers. PSM is derived from corn, which is an annually renewable resource that can handle temperatures up to 200° F, making it perfect for higher-heat applications.

Recycled Polypropylene (Recycled PP) is produced from previously used post-consumer plastic products. EarthChoice uses a minimum of 20% recycled content in Recycled PP packaging based on annual mass usage. This product may not be recyclable in your area.

* Made in the USA from globally sourced materials

** Fiber Blend and PLA Coated Paper products meet the ASTM D6868 compostability standard; PLA products meet the ASTM D6400 compostability standard. These products are compostable in commercial facilities only, which may not exist in all areas.

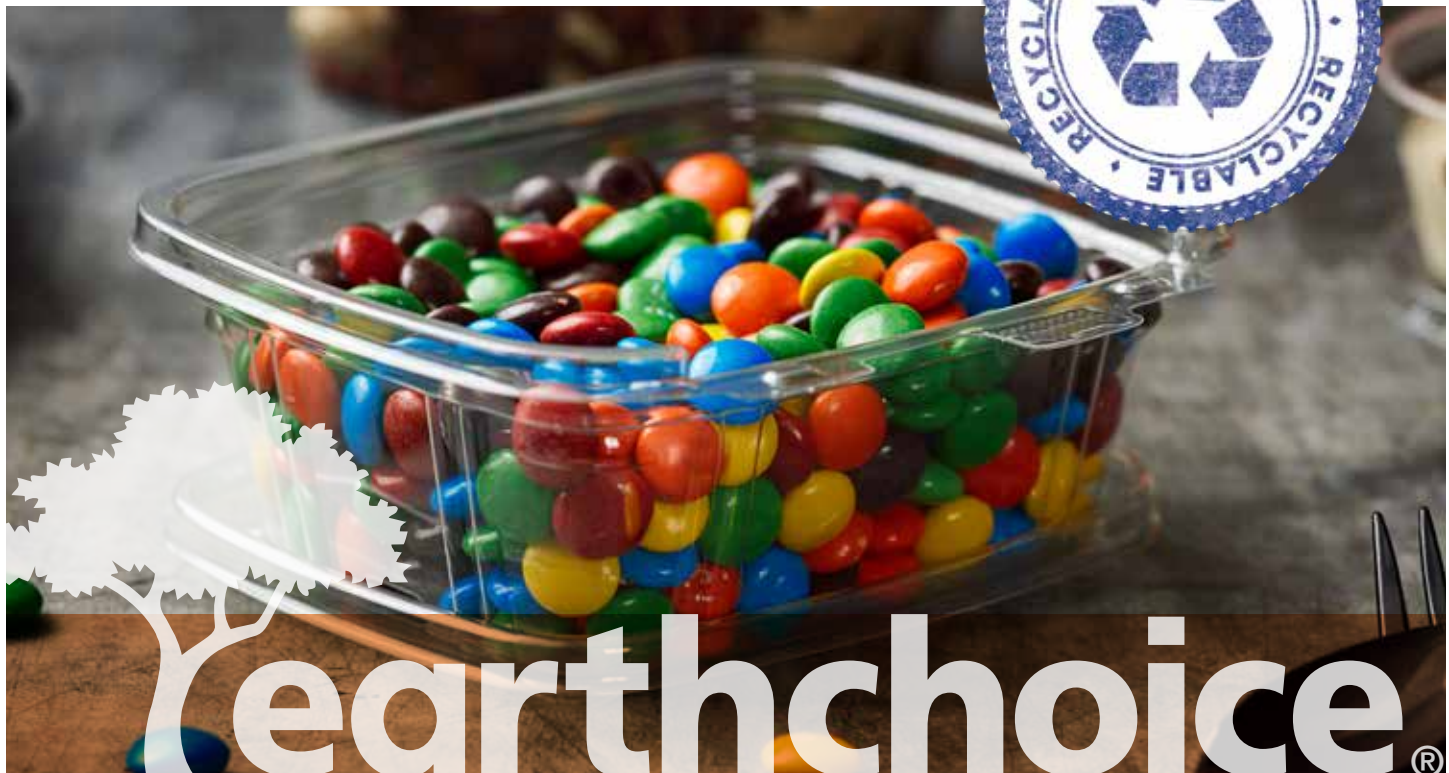

Over 85% of EarthChoice items are made in plants located in the USA and offer a smaller environmental transportation footprint compared to products imported from China.

EarthChoice is the largest sustainable product line in the USA.

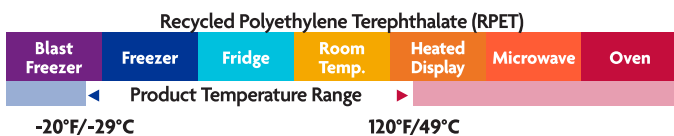

RPET (Recycled PET)

Features

Benefits

Excellent clarity	Makes product identification easy
Versatile	Smooth, glass like finish, leak resistant, stackable, MTO capable
Rigid	Outstanding strength for heavy, thick beverages
Ideal for low temp. applications	Icy cold beverages
Accepted into recycle stream	Recycled content. Made with a minimum of 25% post-consumer recycled materials (PCR). Recycleable. Check locally; may not be recyclable in all areas
PET material	Provides shatter and crack resistance and adds to overall strength

These guidelines are supplied to assist you in determining the proper use of Pactiv products. They are based upon testing and published guidelines and are reliable in most applications. However, because every food supplier's recipes, ingredients, processes and supply chain is unique, these guidelines are not a substitute for product testing. Confirmation of product acceptability under your specific conditions of use must be done by you.

Tamper Evident and Resistant Hinged Lid Containers

RPET (Recycled PET)

NEW

Item Number	TEHL5X408
Description	5x4 Tamper Evident HL Deli/8 oz

Fiber Blend

Features

Benefits

Fiber (Paper) material	Product is made of a blend of Bagasse (Sugar Cane) and Bamboo which are sustainable, annually renewable resources
Strong	Offers durable construction for multi-food applications
Stackability	Helps multiple orders stack easy
Compostable	Many SKUs meet ASTM D6868 compostability standard and are compostable in commercial facilities, which may not exist in all areas. Not suitable for home composting.

These guidelines are supplied to assist you in determining the proper use of Pactiv products. They are based upon testing and published guidelines and are reliable in most applications. However, because every food supplier's recipes, ingredients, processes and supply chain is unique, these guidelines are not a substitute for product testing. Confirmation of product acceptability under your specific conditions of use must be done by you.

Vented MFPP Microwavable Hinged Lid Containers

MFPP (Mineral Filled Polypropylene)

Perimeter seal to prevent leakage!

Optional vents help keep food crispy

Benefits

- ◆ EarthChoice embossing reinforces operators commitment to sustainability
- ◆ Microwavable & heat lamp safe for To-Go waiting allowing versatile food prep
- ◆ Contains optional SmartVents™ designed to keep foods hot & crispy
- ◆ Perimeter seal provides leak resistance for peace of mind during transport
- ◆ Four corner lock features audible “pop” to signal full closure
- ◆ Designed to be stackable in most common size delivery bags
- ◆ Top rack dishwasher safe & reusable
- ◆ Soak proof material ideal for delivery/to-go vs. molded fiber or paper alternatives
- ◆ Ribbed design provides an upscale look with superb strength
- ◆ Cost effective solution for areas with foam bans
- ◆ Excellent cut resistance vs molded fiber or paper alternatives

Compostable Straws

Benefits

- Offers a far superior drinking experience vs paper straws
- Delivers like plastic, but compostable like paper*
- Individually wrapped options for sanitary straw needs
- Flexible and does not crack!
- Translucent color and contains no colorants (natural)
- A flex straw is available for children, health care and individuals with disabilities

Can handle temperatures up to 212 degrees F – also great for hot beverages!

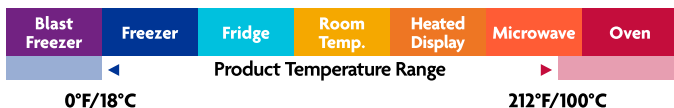

Able to transport and store in warm temperatures without concern of melting

Composting helps divert waste from landfills

Straw meets ASTM D 6400 composting standard

Wrapper meets ASTM D 6868 composting standard (where applicable)

*compostable in commercial facilities, not suited for home composting

These guidelines are supplied to assist you in determining the proper use of Pactiv products. They are based upon testing and published guidelines and are reliable in most applications. However, because every food supplier's recipes, ingredients, processes and supply chain is unique, these guidelines are not a substitute for product testing. Confirmation of product acceptability under your specific conditions of use must be done by you.

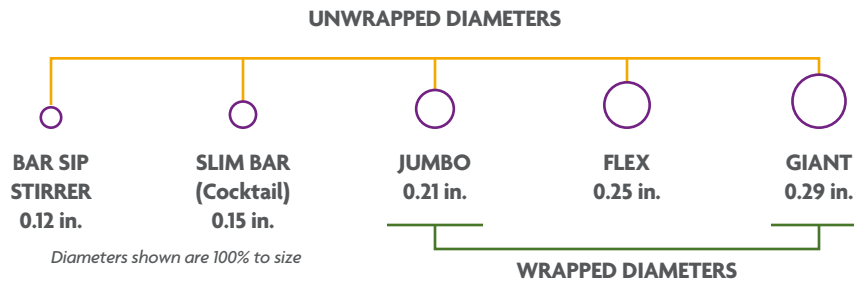

** Made in the USA from Globally Sourced Materials

Compostable Straws

These durable high quality straws look and perform like traditional straws, but they are anything but traditional! Made from a proprietary plant-based compostable plastic which is annually renewable, these straws are perfectly paired with our compostable PLA Cold Cups.

Compostable* Tableware

*Commercially compostable only. Facilities may not exist in all areas. Not suitable for home composting.

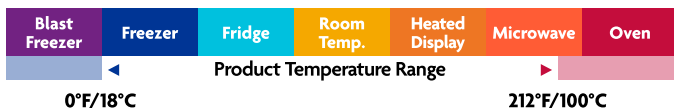

Benefits

- Made in USA
- Uses sustainable bio-based coating instead of standard PE coating
- Durable, heavy weight construction with cut resistant coating to reduce liquid soakage
- Ideal for use with heavier or moist foods, including hot or cold applications
- Neutral color with the EarthChoice logo showing the sustainable message on the plates/bowls
- Made from plant-based renewable resources; meets ASTM-D6868 standard for compostability
- Does not use PFAS chemicals
- Microwave safe to reheat

PSM (Plastarch Material) and RPP (Recycled Polypropylene) Cutlery

EarthChoice PSM Cutlery is manufactured from a blend of different materials, the majority of which is starch. 20% of the base material comes from corn not originally intended for human consumption (not genetically modified). This material can handle temperatures up to 200F which makes it perfect for higher heat applications.

Our EarthChoice Recycled Polypropylene Cutlery is made from a minimum of 20% previously used post-consumer plastic products. Products made from post-consumer materials mean less plastic in landfills. This unbreakable lineup performs with the same strength as traditional polypropylene cutlery and can be used for both hot and cold foods.

These guidelines are supplied to assist you in determining the proper use of Pactiv products. They are based upon testing and published guidelines and are reliable in most applications. However, because every food supplier's recipes, ingredients, processes and supply chain is unique, these guidelines are not a substitute for product testing. Confirmation of product acceptability under your specific conditions of use must be done by you.

*PCR stands for post-consumer recycled material, which is material reclaimed and recovered after consumer use.

The OneBox[®]

Benefits

- Easy to close one piece paper container with secure front latch closure (New OneBox design)
- Leak resistant coating prevents sauces and liquids from penetrating through the container
- Designed to be stackable in most common size delivery bags
- Variety of sizes fitting multiple operators applications & optimized for off-site dining
- Made in the USA **
- Large area to add sticker/label which is great for operators to identify what's inside and create a tamper evident seal
- Custom printable so restaurants can showcase their logos and branding

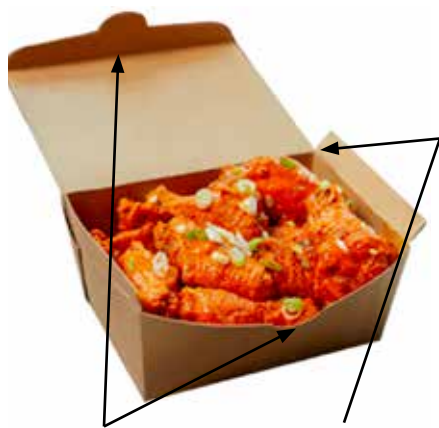

These guidelines are supplied to assist you in determining the proper use of Pactiv products. They are based upon testing and published guidelines and are reliable in most applications. However, because every food supplier's recipes, ingredients, processes and supply chain is unique, these guidelines are not a substitute for product testing. When Sustainability Means Business,
Make the EarthChoice.
It's Better. To Go.

Switch to EarthChoice with confidence.
 Visit EarthChoicePackaging.com to begin a conversation about your sustainable packaging needs.

Reduce

We reduce the use of petroleum-based materials by incorporating other materials like minerals and plant-based starches into select EarthChoice products.

Reuse

We design products that may be washed and reused by consumers.

Recycle

We manufacture products that include post-consumer recycled materials and actively engage in initiatives to expand recycling of foodservice packaging.

Renew

We utilize renewable resources and actively engage in initiatives to expand composting of foodservice packaging.
