Your Go-To for Cleaning Products

Dispensing

Did you know?

You need to leave antibacterial cleaners on dirty surfaces for 30 to 60 seconds before wiping it away. It allows enough time for the cleaner to absorb dirt and kill bacteria and germs.

Cleaning and disinfecting are two entirely different things. Cleaning is the action of removing dirt, while disinfecting is defined as destroying or preventing the growth of disease-carrying microorganisms. Remember that disinfecting everything too much can actually lower your defenses against germs and viruses.

98% of office workers will contract some form of contagious illness during their professional lives due to poor workplace sanitation.

How to Unclog a Spray Bottle

Use Warm Water

If you think your spray bottle has a clog, take the top off and place the tubing (with the nozzle still attached) in a cup of hot water; pump the spray top until water sprays out with ease. Once you're satisfied with the mechanism, place the top back onto the bottle and continue using.
